

Project 2: Expense Tracker

Objective

The objective of this project is to create an Expense Tracker that records expenses and calculates the total amount spent.

Tools Used

- Python
- Visual Studio Code

Description

The program allows users to enter expense amounts. Each expense is stored, and the total expenditure is calculated automatically.

Algorithm

1. Create an empty list for expenses.
2. Initialize total expense to zero.
3. Accept expense input from the user.
4. Add the expense to the list.
5. Update the total amount.
6. Display expenses and total expenditure.
7. Exit the program.

Result

The program successfully records expenses and calculates the total spent amount.

Conclusion

This project helped in understanding accumulators, mathematical operations, and data processing in Python.
